

Jason Lin

Senior Software Engineer

amigo_brian@hotmail.com | linkedin.com/in/jasonlin666 | github.com/Jadson666

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience building frontend-focused, full-stack web applications across fintech, blockchain/Web3, e-commerce, payment systems, ERP, and semiconductor manufacturing. Strong in React.js, Vue.js, JavaScript, Java, Node.js, SQL, C/C++, and AWS. Proven record delivering high-traffic payment and crypto products, modernizing legacy systems, improving development efficiency, mentoring engineers, and leading teams from early-stage setup through production delivery.

TECHNICAL SKILLS

Frontend: React.js, Vue.js, Next.js, AngularJS, JavaScript, HTML, CSS, Tailwind CSS, Styled Components, Redux, SPA architecture, SSR/CSR rendering

Backend: Node.js, Java, Spring MVC, NestJS, Ruby on Rails, REST APIs, SQL, PL/SQL, Oracle, MySQL

Web3 and Payments: Ethers.js, MetaMask, smart contracts, DeFi wallets, stablecoin issuance, fiat-to-crypto flows, KYC, mint/burn/transfer workflows, online payments

Cloud and DevOps: AWS, ECS, EC2, CloudWatch, GCP, Linux, shell scripting, CI/CD, monorepo, micro-frontend architecture

Leadership: Agile delivery, technical mentoring, cross-functional collaboration, team building, SOP design, Git flow, legacy modernization

PROFESSIONAL EXPERIENCE

TSMC - Senior Software Engineer

June 2025 - Present | React.js, Java | Taipei, Taiwan

- Designed and implemented automation strategies for wafer transportation between semiconductor equipment, reducing manual intervention and improving process flow visibility.
- Built operator-facing UIs for wafer status tracing and manual intervention workflows, improving production-line situational awareness and operational response.
- Migrated and refactored a legacy JSP web product into React.js, earning the department's top yearly usage recognition at approximately 10% usage share.
- Led 8 teammates to complete assigned projects 100% on time while defining development flow, onboarding standards, team roles, and responsibilities from scratch.

Binance - Senior Frontend Engineer, Web3/Web2

June 2022 - March 2025 | React.js, Vue.js, Next.js, Web3

- Delivered frontend platforms for payment and stablecoin products covering token issuance, buy/sell flows, transaction monitoring, KYC, fiat-to-crypto integration, and blockchain transfers.
- Integrated UI workflows with smart contracts, DeFi wallets, MetaMask, and Ethers.js to support mint, burn, transfer, and cross-chain wallet interactions.
- Released 2 Ethereum tokens and related platforms, including FDUSD, a top 5 stablecoin by market cap with over \$2B in circulation.
- Delivered credit card products on a platform serving 1M+ users, coordinating product quality across multiple teams.
- Upgraded rendering and development frameworks across multiple projects, improving performance by at least 20%.
- Led development for 6 startup-style applications across mobile and desktop web experiences.

SHOPLINE - Senior Software Engineer

June 2021 - June 2022 | React.js, AngularJS, Ruby on Rails | Taipei, Taiwan

- Developed core e-commerce platform features enabling merchants across 5 countries to build online stores, process payments, and use advertising solutions.
- Modernized legacy AngularJS architecture toward React.js using monorepo and micro-frontend patterns.
- Improved maintainability by at least 20% through codebase refactoring across an 8-year-old production platform.
- Automated engineering workflows with 3+ scripts, improving team delivery efficiency by at least 15%.

Innova Solutions - Software Engineer

March 2017 - February 2021 | React.js, Java, Next.js, NestJS, Node.js | Taiwan

- Designed and developed startup-style User Portal and Credit Card Enrollment applications using React.js, Redux, and Create React App.
- Built SPA frontend systems with React.js, JavaScript, HTML, CSS, render props, higher-order components, and reusable component patterns.
- Developed Spring-based Java web applications, REST APIs, Node.js services, and microservice-oriented backend workflows.
- Integrated Apple Pay and credit card payment services into an online payment system expected to support 20K+ users.
- Improved deployment efficiency by 300% using AWS services including ECS, EC2, and CloudWatch.
- Took ownership of large legacy systems from an offshore team and refactored software architecture for maintainability.
- Mentored junior React.js and frontend developers until they became independent contributors.

Auchan Retail - Software Engineer

May 2015 - February 2017 | Java, C/C++, PL/SQL | Taipei, Taiwan

- Developed national-level ERP systems across 20+ distributed databases using PL/SQL, Pro*C, Java, Linux, and Oracle Forms.
- Led development of a new ordering system that improved daily operational efficiency by 300%.
- Built automation tools, including cross-system monitoring and automated promotion data upload, improving routine efficiency by at least 300%.
- Designed a replacement system for an ERP platform supporting 20K+ users.

EDUCATION

National Taiwan Normal University - Bachelor of Computer Science and Information Engineering, 2008 - 2013

CERTIFICATIONS

AWS Certified Developer - Associate | Oracle Certified Associate, Java SE 8 Programmer | TOEIC 905/990 | DELF A2 French

LANGUAGES AND ADDITIONAL WORK

Chinese: Native | English: Professional, TOEIC 905/990 | French: Professional working proficiency, DELF A2 | Created 10 hours of free online frontend web design course content: youtu.be/MX9DRou26fI
